MICHELL'S SUPERB DARWIN TULIPS

Darwin Tulips are ideal for the herbaceous border or massed in clumps in front of shrubbery. As a cut flower for vases they are superior to any other class of tulips. The splendid form, exquisite coloring and the enormous size of numerous varieties make them the favorite of all tulips. They belong to the May-flowering or late blooming class and produce their gigantic flower cups on long, stiff stems, above the broad foliage. They are also splendid for pan or pot culture. As this class is short of yellow, orange, and bronze varieties, these colors may be obtained in the Breeder and May-flowering or Cottage Garden types; the flowers are similar in shape and bloom at the same time as the Darwins. Ideal arrangements and color effects can be obtained by a combination planting as suggested above.

CULTURAL DIRECTIONS.—For Bedding Out. Plant in October or November in good, well-drained garden soil; set the bulbs 5 to 6 inches apart and 4 to 5 inches deep. After the ground has frozen, cover with litter, leaves or manure to protect them from frost; this should be removed in the Spring when danger from hard frost is past.

For Pot or Pan Culture.—Plant 4 to 6 bulbs in a 6-inch pot or pan, water thoroughly and then remove to the open ground or in a cold frame, covering with coal ashes; after they have rooted thoroughly they should be brought in a moderately cool room and gradually warmer; by bringing in a fresh supply every ten days, they can be had in bloom all Winter.

For complete cultural notes, see "Michell's Bulb-Growing Guide," sent free on request.

The asterisk (*) preceding the variety denotes that it is suitable for forcing as well as bedding. The letters E, F and G following the variety indicate their relative time of blooming, the E's being the earliest to bloom. The figures indicate the normal height in inches.

15TH NATIONAL FLOWER AND GARDEN SHOW
ROCHESTER, N. Y.
APRIL 14 TO APRIL 22, 1934

A May-flowering type, similar to the Darwins, in their tall, strong growth and flowering at the same time; they produce immense blooms on long, stiff stems and in some instances are larger than the Darwins. Their artistic colors make them great favorites among those who desire to contrast their bronze, terra-cotta and buff shadings with the lighter colored sorts of the Darwins. They make a fine effect in hardy borders, and when used as a cut flower last a long while in water.

The asterisk (*) preceding the variety denotes that it is suitable for forcing as well as bedding. The letters F and G following the variety indicate their relative time of flowering, the F's being the earliest to bloom. The figures indicate the normal height in inches.

If Tulip Bulbs are wanted by Parcel Post, add 25c. per 100 for postage.

Suggestion

As Breeder tulips contain shades that are not to be found in either Darwin or May-flowering or Cottage tulips, a selection made from this list and planted in combination with the types above mentioned will produce a display of color that cannot be duplicated. Give your garden that finished touch by planting Breeder tulips.

Bacchus. F 28. Dark violet blue, base starred white, the nearest approach to dark blue in late tulips; one of the best varieties to plant with bronze or light blue shades. 90c. per doz.; per 100, \$6.00; \$55.00 per 1000.

MICHELL'S SUPERB NAMED HYACINTHS ⁹

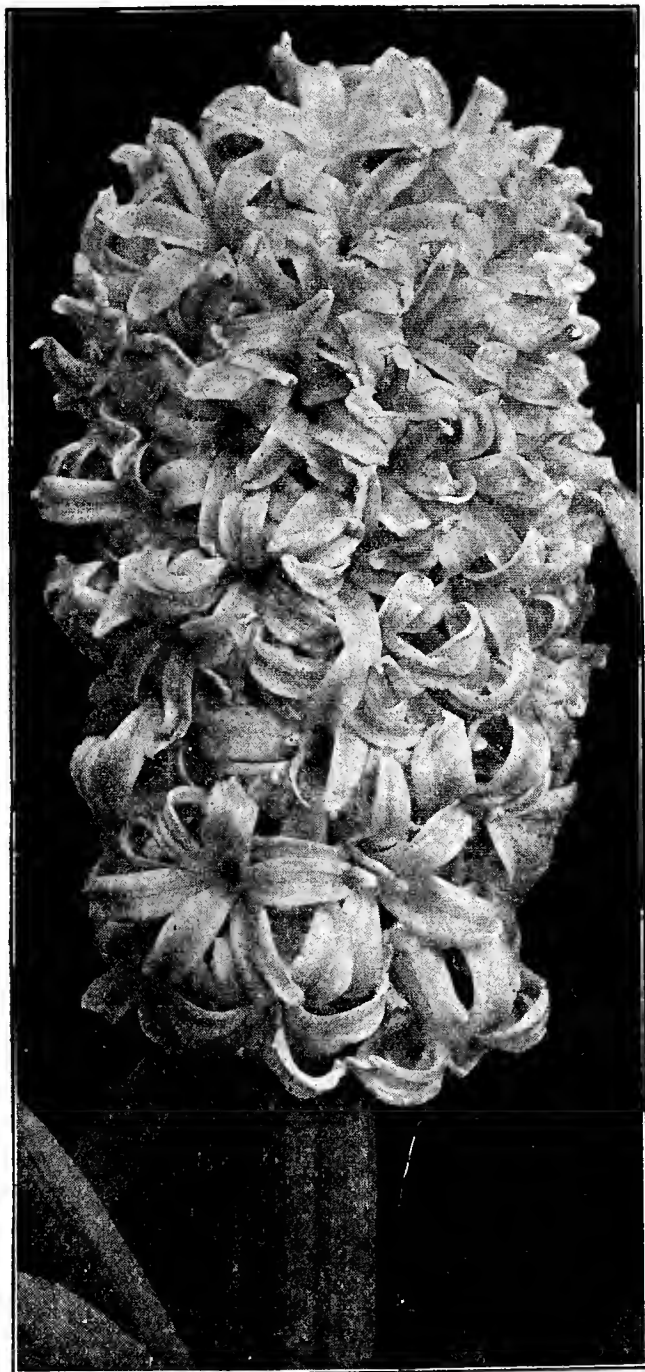

Our Hyacinth bulbs are of best quality, grown by specialists especially for us. The bulbs are of maximum sizes, fully aged.

CULTURAL DIRECTIONS FOR HYACINTHS.—Outdoor Culture. Plant in October and November in good, well-drained garden soil. Plant bulbs so that the top will be 3 or 4 inches below the surface and 6 to 8 inches apart. After the ground has frozen, cover with litter, leaves or manure, to protect them from frost; this should be removed in the Spring when danger from hard frost is past.

Pot Culture.—Plant any time from September to December, using a 4 or 5 inch pot for single bulbs, or several bulbs may be planted in a larger pot or bulb pan. After planting, water well and place in a cool, dark, airy place until well rooted, after which remove to a cool room and later to a warmer room.

Culture in Glasses.—The single varieties are the best. Place the bulb in a glass, which should be filled with water, so it touches the bottom of the bulb, and place the glasses in a cool, dark place. Change the water occasionally. Keep in the dark until well rooted and then remove to a light, cool place.,

Michell's White Roman Hyacinths

FRENCH ROMAN HYACINTHS

French Roman Hyacinths afford a continuous supply of bloom from early Winter until late in Spring if planted in succession. They are very fragrant.

Easily grown in pots or pans; if bulbs are potted in September, the pots plunged in the open ground for a month, until well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of flowers may be had by bringing in a few pots or pans at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large for six bulbs. They are not hardy and are not suitable for outdoor planting.

If wanted by Parcel Post, add 10c. per doz., 30c. per 100, for postage.

MICHELL'S PREPARED BULB FIBRE

The ideal material in which to grow bulbs, such as Roman Hyacinths, Dutch Hyacinths, Narcissus, Tulips, etc., using vases, crocks, or other receptacles, without drainage. The advantage of this system is that the vases can be placed anywhere about the house, in the drawing room, or dining room, without any fear of water or soil coming through the base of the pots. The bulbs are potted the same way as in ordinary soil, after which they require little attention, except to keep the material moist.

BLUE ROMAN HYACINTH "VIRGINIA"

This Blue Roman Hyacinth, which has been successfully grown for the last few years, comes from France. It is a cross between the Dutch Hyacinth, Captain Boynton, which is one of the finest of porcelain blues, and one of the strongest growers, and the White French Hyacinth, from which it receives its daintiness and earliness of bloom. Virginia has much larger bells and the stem is longer than the White Roman. It will produce two or three perfect flower spikes to the bulb; these do not appear together, but are successive in their bloom, thereby supplying flowers from the same planting over a long period of time.

Virginia will bloom for Christmas, coming at a time when flowers are scarcest in the greenhouses. If not required at that time, it may be grown cool and flowered when wanted. It is impossible to describe or say too much about this Hyacinth. We feel it is really one of the finest introductions in recent years.

AMERICAN GROWN

No garden is complete without the Narcissus or Daffodil, it being among the most beautiful and fragrant of our hardy Spring flowering bulbs, doing well in almost all soils and situations, for naturalizing, planting among shrubbery and in formal beds. For house or greenhouse culture they are equally desirable, planted in pots or pans.

Culture.—Owing to the various sizes of the bulbs of different varieties, we cannot advisably give the exact depth to plant, but a good rule to follow is to cover the bulb one and one-half times its own depth. For house culture 3 or 4 bulbs can be put in a 5-inch or 6-inch pan or pot and given the same treatment as Hyacinths.

The figures prefixed before the variety denote the height. The letters following the varieties indicate their relative time of flowering, the B's being the earliest to bloom, the C's the latest.

If Narcissus bulbs are wanted by Parcel Post, add 30c. per 100 for postage.

NOTE.—Monster bulbs will be supplied in all varieties, except where noted.

Narcissus, W. P. Milner is a dainty subject for pans or ornamental bowls.

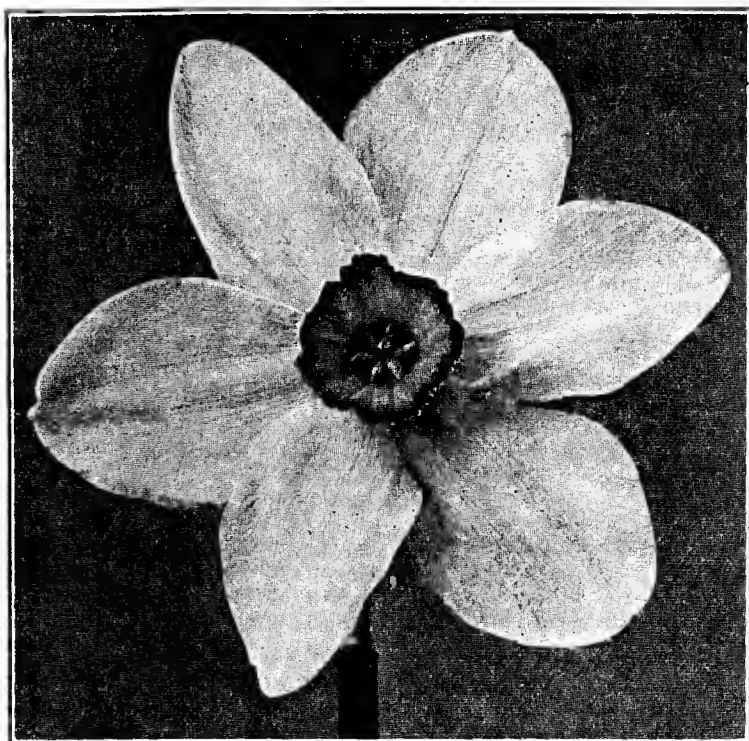

Picture a bed of Olympia Narcissus widely planted and spaces filled with light blue pansies.

Try Narcissus, Robert Sydenham, planted on the north side of a small pond's edge; the huge flowers will face the water and their reflection will create a superb view from the south side.

Narcissus, Van Waveren's Giant and Single Early Tulip, Brilliant Star, planted together produce a color effect that is lingering.

For Indoor Culture

Cultural Note.—Upon receiving the bulbs, pot them immediately. Place a handful of well-rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60 degrees; let the plants grow slowly under a bench or some other suitable place until about 6 inches high, then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time.

Special Notice Regarding Delivery

Most of the varieties listed below will arrive in time for Fall planting. It often happens, however, that some varieties reach us too late for Autumn planting. Orders for these will be held for early Spring delivery. When ordering, please specify if you desire for Fall or Spring delivery.

It is advisable to prepare your lily bed in the early Autumn and cover with 3 or 4 inches of litter; this will prevent freezing and will permit safe planting of the late arrivals.

For complete cultural notes, see "Michell's Bulb Growing Guide," sent free on request.

If Lily Bulbs are wanted by Parcel Post, add 20c. per doz. for postage.

CROCUS

One of the earliest flowers to bloom in Spring; most effective for borders or beds, also for planting in clumps amongst shrubbery and for the rock garden. In lawns, planted in the grass the Crocus are extremely effective. An effective method of planting is to scatter them over the lawn by digging up a small piece of sod here and there and placing one or two bulbs in each spot; this gives a very pretty effect. The Giant Flowering varieties are also splendid for flowering in pots, but too severe forcing must not be attempted; height, 6 inches.

If wanted by Parcel Post, add 15c. per 100 for postage.

FOR FALL PLANTING

Many of the most successful Rose growers prefer planting their Roses in the Autumn. We are now booking orders for strong two-year-old Field-grown budded plants, which will be ready for shipment just as soon as they are properly ripened by frost, which is usually late in October or early in November. Plants shipped in the dormant state take up but very little room and they may be safely shipped by parcel post. If there is danger of the ground freezing before the arrival of the plants, the space where you wish to plant them may be protected by a covering of leaves or other loose litter. When the plants arrive, plant them so that the bud is covered with at least one inch of soil; then make a mound of earth around the base of the plant about twelve inches high; by doing this all of the buds on the lower ends of the branches are covered with soil; this covering protects them from the alternate freezing and thawing which is so injurious. Early in the Spring, before growth starts—but after danger of severe frost is over, this covering of earth should be removed and the plants pruned.

Angele Pernet. A most unusual color in Roses. Long pointed buds opening into semi-double fragrant flowers of a coppery orange-yellow.

Betty Uprichard. Well formed medium sized flowers of a pleasing combination of colors, the inside of petals being salmon-pink, the outside carmine with copper and orange suffusion.

Briarcliff. A recent introduction which gives promise of a great future. The size, form, color, stem and foliage leave nothing to be desired. A glowing rose-pink in color with delightful fragrance.

Chas. K. Douglas. Fine long-pointed buds opening to large flowers of bright crimson-scarlet; slightly fragrant. A strong healthy grower.

Charles P. Kilham. Large, beautifully shaped blooms of brilliant orange-red, suffused with scarlet; slightly fragrant. Healthy foliage and a vigorous upright grower.

Dame Edith Helen. Shapely buds and substantial high centered blooms of clear pink, sweetly scented. A strong grower and very free flowering.

Duchess of Athol. The coloring of this new variety is uncommon and delightful, golden-orange flushed with peach-pink. A vigorous grower and free bloomer.

Duchess of Wellington. Intense saffron yellow changing to coppery yellow. Flowers large, moderately full, of the Killarney type, beautiful buds and delightfully fragrant. A superb yellow rose and a splendid grower.

Edel. A British introduction of exhibition quality, producing large beautifully formed flowers of ivory-white passing to pure white. A strong grower of uniform habit, very free flowering, opening in all weathers and delightfully fragrant.

E. G. Hill. A new red variety, which has gained great popularity as a Winter cut-flower, but is equally good for the garden. The color is a bright scarlet shading to a deeper red as they develop; high centered full double flowers; a vigorous grower and free flowering.

Etoile de France. Well formed buds that develop into full open flowers of red and soft velvet crimson, shading to vivid cerise. One of the very best and most dependable Roses of its color; needed in every garden.

Etoile de Hollande. Brilliant red flowers of large size, perfect in half open state, showing clean, attractive centers when fully open; petals enormous; very fragrant. A strong, vigorous and healthy grower; very free flowering.

Francis Scott Key. Large double flowers of rich crimson-red; a strong grower and very free flowering.

Gruss an Teplitz. This is a rose for everybody, being the most profuse blooming crimson rose in existence. The color is of the richest scarlet, shading to a velvety crimson; very fragrant. It will succeed under the most ordinary conditions, doing well where other roses fail.

Joanna Hill. A new yellow rose with large, long pointed buds, which open to large full, semi-double flowers of a clear yellow, with orange-yellow center. A vigorous, upright grower and profuse bloomer.

Jonkheer J. L. Mock. A favorite with hundreds of Rose lovers. The flowers are large and of more than ordinary beauty. The deep imperial pink on the outside of the petals and the shining silvery pink on the inside make a double colored bloom.

Julien Potin (Golden Pernet). Long pointed buds opening into large full flowers of a pleasing golden-yellow. A strong upright grower and profuse bloomer.

Kaiserin Augusta Victoria. An old variety but still one of the best, and it should be in every collection. In color it is a soft pearly white tinted with lemon.

Hybrid Tea Rose, Dame Edith Helen

Lady Alice Stanley. A rose that is admired by everyone, not only for its freedom of bloom and fragrance, but also for its color, which is a beautiful shade of coral-rose on the outside of the petals with purple flesh on the inside.

Lady Ashtown. Extremely beautiful flowers of pale carmine-pink, shading to golden yellow at the base of the petals. The blooms are large, globular, and well formed, rather higher in the center than at the edge. Excellent for garden or greenhouse and a profuse bloomer all season until frost.

Lady Hillingdon. One of the best Tea Roses of its color, deep apricot yellow throughout. It varies from medium to large size and is very beautiful both in bud and in flower. The plant is hardy, a strong grower and very floriferous.

Mme. Butterfly. While this is a sport of Ophelia, it shows an even better growth, with more and larger flowers, in a brilliant pink, suffused apricot and gold. These flowers are in the ideal Rose form, of good texture and fragrance and are unusually enduring. The plant is free and fine in growth and habit.

Mme. Caroline Testout. One of the most popular and valuable bedding varieties; large globular flowers of bright satiny rose with brighter center. Strong vigorous grower; very free flowering and fragrant; particularly fine in Autumn.

Mevrouw G. A. Van Rossem. A beautiful rose with unique color combination, a blending of dark orange and apricot on a yellow ground with touches of bronze on the reverse of the petals. The flowers are sweet scented, large and of perfect form.

Mme. Edouard Herriot. This is the celebrated "Daily Mail" rose which has been so extensively advertised. In color it is coral red, shaded with yellow and bright rosy scarlet with yellow at the base, a wonderful combination of most pleasing colors.

Mme. Jules Bouche. Beautiful white flowers, sometimes shading to light blush in the center. One of the best white bedding Roses to date.

Price, any of the above, 75c. each; per doz., \$7.50; \$60.00 per 100.

FOR FALL PLANTING

Miss Rowena Thom. Large, long pointed buds developing into perfect flowers; color, a blending of fiery rose and rosy mauve, together with old gold.

Mrs. Aaron Ward. A very free blooming variety of vigorous but compact growth. The flowers, which are of splendid form, are full double and are equally attractive when in full bloom as in the bud state. The color is distinct Indian yellow, which under certain conditions becomes yellow tinted white.

Mrs. Wakefield Christie-Miller. Large, globular, peony-flowered blooms of pearly blush, shaded salmon-pink, the outside of the petals being vermilion and rose, which lovely combination is not affected by the hottest sun. Plants strong, of erect and vigorous growth, and with a blooming habit taking it clear through the season and until late Autumn.

Pink Pearl. Brilliant cerise-pink, the base of the petals touched with gold, lighting up the flower wonderfully; the flowers are full double, of perfect form and very sweet scented.

President Hoover. A wonderful new rose with a splendid color combination, cerise-pink, flame, scarlet and yellow. Long pointed buds; moderately fragrant and free flowering.

Radiance. A Rose of American origin and to our mind one of the very best varieties in cultivation today. It is an ideal bedder, producing large flowers throughout the Summer when many other varieties are out of bloom; in color a beautiful even shade of pink. This Rose should be in every garden.

Red Radiance. A counterpart of Radiance, from which it is a "sport," possessing all of the good points of that valuable variety, but differing in color, which is bright cerise-red.

Rev. F. Page Roberts. Long-pointed, coppery red buds opening into golden-yellow flowers, stained with red on the outside; fully double, very large and fragrant. A strong branching plant with good healthy foliage.

Rose Marie. One of the best bedding roses. It produces beautiful long buds which open into large flowers of perfect form and of a pleasing clear rose-pink in color.

Souvenir de Claudius Pernet. A most vigorous grower of erect branching habit; beautiful, brilliant green foliage; long pointed buds of exquisite shape, carried on long, stiff stems. Very large full flowers with elongated deep petals, a beautifully formed bloom. Color, a most striking sunflower yellow, deeper in the center without any color blending.

Souv. de Georges Pernet. A strong vigorous grower and free bloomer. The flowers are large; globular in form; color, Orient red shading to a cochineal-carmine at the end of the petals, the whole being suffused with a golden sheen.

Sunburst. A vigorous grower with erect or slightly spreading habit and dark bronzy foliage. The flowers are of medium size, full and of fine elongated cup form; color a superb cadmium-yellow passing to yellow-orange in the center.

Talisman. A new American rose of exceptional coloring; the outside of the petals is bright yellow, gold and pink; as the flower opens it becomes bright apricot, gold and rose-pink. The bud is long, pointed and opens into a full double flower. A strong grower with glossy foliage and very free flowering.

Ville de Paris. Pure yellow without a trace of any other color, standing up under all weather conditions; round buds and large globular flowers, somewhat similar to Radiance, fairly double and splendid for cutting.

Wilhelm Kordes. Unique and entirely distinct in color; a rich capucine red with coppery suffusion overlaying a golden-salmon ground, long pointed buds, opening to high centered, very fragrant flowers.

HARDY CLIMBING AND
RAMBLER ROSESTHE NEW HARDY EVERBLOOMING SCARLET
CLIMBING ROSE "BLAZE"

U. S. Plant Patent No. 10. A marvelous new hardy climbing Rose which inherits the blazing habit of Paul's Scarlet Climber and the everblooming habit of Gruss an Teplitz, thus combining the most attractive features of both of its parents.

It is a very vigorous grower and will produce flowers on both the old and new growths. A Rose that will become very popular. Strong two-year-old plants, \$2.00 each.

THE NEW DAWN

The Everblooming Dr. Van Fleet. A sport from Dr. Van Fleet which is acknowledged to be the best and most popular American Climbing Rose. This new variety is identical in every way with the parent in size, formation of flowers and color, but flowers continuously during the entire season. Strong two-year-old plants, \$1.50 each.

American Pillar. The large single flowers are a lovely shade of cherry pink with a clear white eye surrounding numerous golden yellow stamens.

Aviateur Bleriot. A strong growing plant with beautiful glossy insect and disease proof foliage, bearing large clusters of medium sized double flowers of a saffron yellow color.

Bess Lovett. Resembles Climbing American Beauty in shape of flower, but much brighter in color, being a clear bright red, double, full cupped form and of notable lasting quality.

Chaplin's Pink Climber. A striking novelty, similar in size and form to Paul's Scarlet Climber but in color a rich lively pink.

Christine Wright. A beautiful rose of strong climbing habit, producing double flowers 3 to 4 inches in diameter, singly and in clusters, of a wild rose pink.

Climbing American Beauty. The name of this rose is rather misleading, yet on its own merits it is a splendid climber. It has but one blooming season, June, when it bears very abundantly; a very bright self-colored, medium pink flower.

Dr. W. Van Fleet. One of the most important climbing roses, having perfectly formed buds, long and pointed, deep pink in color and very solid. The full blown flowers are very large, borne on long stems, fragrant and fine for cutting.

Dorothy Perkins. Beautiful shell pink, fragrant and full, blooming in clusters in June. This is a very good rose for covering stone walls, fences, embankments and arbors.

Emily Gray. The buds are long and pointed, of splendid shape; in color a beautiful light orange-yellow, changing to pale orange as they expand.

Jacotte. A wonderful new yellow climbing Rose with bright glossy green foliage and sweet scented orange-yellow flowers. \$1.00 each.

Year by year these old-fashioned hardy flowers are gaining favor, and deservedly so, as there is not a time during the whole flowering season when some variety is not in bloom; they are especially valuable during the late Summer and Autumn, when there are but few shrubs in bloom. From early April they continue with constant changing variety throughout the Summer and Fall, when they are stopped only by severe freezing weather. Hardy Perennials appear year after year, and as each variety has a fixed time for blooming, a selection can be made that will give flowers to cut from early Spring until late Fall. The most satisfactory arrangement is to plant them in a border, which can be made in front of a hedge, fence or wall, or in the open garden; the soil should be dug to a depth of 18 inches or two feet, pulverizing it thoroughly and working in a liberal quantity of well-decomposed stable manure or other fertilizer. The plants should be placed in groups of three or more of one variety together, the taller growing sorts at the back, the medium heights in the center and the dwarf varieties in front; they should also be placed so as to have some flowers in all parts of the border at all times. This can easily be arranged by referring to our descriptions as to the time of flowering. Our book on "The Hardy Flower Garden" is an instructive publication, and can be had free on request. We offer only such varieties as can be planted in the Autumn.

Next to Roses these are the most popular June flowers, and justly so, for they lend themselves to almost any style of planting, while for the little care required they give a variety of color and wealth of bloom unequalled by any other plant. Their requirements are few; they will succeed in any good garden soil in an open sunny position. Care should be taken, however, to keep all fresh manure away from the roots—if barnyard manure is used it must be thoroughly decomposed; if you are unable to procure this, Bone Meal makes a good fertilizer. Peonies may be planted any time after September 1st until the ground freezes in the Autumn, and in the early Spring until the season is too far advanced; the best time, however, is during September and October, as they make roots during the moist cool weather of the Autumn and consequently carry through the Winter in better shape. The roots should be set so that the top or upper eyes are about two or not more than three inches below the level of the soil; do not set the roots flat, but stand them up. For the best results Peonies should be planted from three to four feet apart each way, according to the space at your disposal; the ground around them should be well cultivated at all times and in the Spring after growth starts they should have an abundance of water if the season is at all dry. When cutting the flowers always leave one or two bottom leaves; it is best to leave a few flowers on the plant also, as it is of vital importance that sufficient foliage be left to develop the eyes under the ground for next season's growth. Newly planted roots may not develop a characteristic flower the first season, in fact it is usually not until the third year that perfect flowers true to description will be produced. Peonies are seldom troubled with any disease or insect pests; ants sometimes appear on the buds, coming to gather a sweet gum which the bud exudes while developing; they will do no harm and will disappear when the flower opens.

MICHELL'S CHOICE THRIFTY HEDGE PLANTS

NEW RED-LEAVED JAPANESE BARBERRY

Similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubbery border as single specimens, or for planting in clumps on the lawn as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy red, similar to the richest red-leaved Japanese Maples. However, unlike these and other colored shrubs in which the coloring fades or disappears entirely as the season advances, this new Barberry becomes more brilliant and gorgeous throughout the Summer, and in the Fall its foliage changes to vivid orange, scarlet, and red shades, more brilliant and more effective than in the ordinary Japanese Barberry. In this coloring it is unequalled by any other shrub and is followed by the same brilliant scarlet berries common to the type, which remain on the plant the entire Winter.

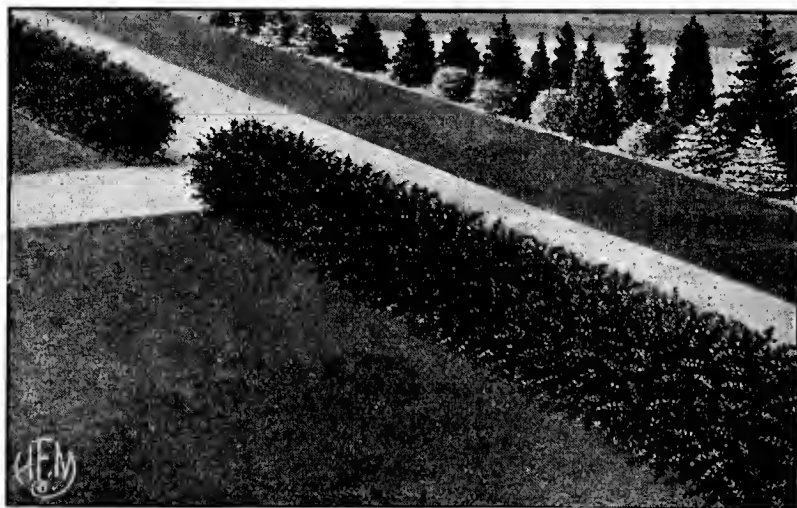

All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure to the sun.

BERBERIS THUNBERGII (Japanese Barberry)

A good hardy plant of low dense growth. It is a brilliant light green from early Spring to Winter; it should be regarded as a shrub, as it can be planted individually in lawn or border. The slender branches are prickly, with small thorns, and tend to make a defensive hedge that few animals will attempt to penetrate. In Autumn the foliage is a bright crimson; when it falls a profusion of scarlet berries, which remain throughout the Winter, are revealed on the branches.

CALIFORNIA PRIVET

Unlike a fence, which needs painting, repairing, etc., and then never looks well, this hedge is no further expense after planted and it adds dignity and charm to any home. Privet is somewhat of an Evergreen nature and looks attractive until real Winter sets in. Plants should be set 12 inches apart in double rows, in zig-zag fashion, so that the plants are diagonally opposite each other; this practically places them 6 inches apart, which is desirable to get a thick, dense growth. Plant from October 15th till the ground freezes, and from March 15th to May 15th.

RHUBARB ROOTS

(Ready October 1st for Fall planting; April 1st for Spring planting)

Rhubarb is as readily obtainable in winter as in spring. The clumps, which should be at least four years old, should be planted in good garden soil in a cool cellar, preferably as dark as possible. When practicable, a barrel or a peach basket, either without a bottom, should be placed over each root to draw the top up. Does extra well under greenhouse benches. Place the roots as close as possible. When spring approaches and rhubarb is obtainable outdoors the clumps may be planted out for use another season. The roots should always be subjected to a slight frost before planting indoors.

MICHELL'S RELIABLE GRASS SEED

Advantages of Sowing Mixed Grass Seeds

It is a well known fact that a well balanced combination of grasses will give better results than a separate variety. Various grasses in mixture will help crowd out weeds. Often a separate variety of seed will not thrive on certain soil, but where there is a combination of seeds, one or more varieties in the combination will surely thrive, and our formulas are so well blended that they will give very satisfactory results. Liberal and frequent applications are advised, especially on new ground, in order to produce a satisfactory velvety lawn, which is always much admired.

Quantity to Sow for Lawns. We recommend sowing one quart to a space 10 x 10 feet; one peck to 1000 square feet; half bushel to 2000 square feet; one bushel to 4000 square feet or 40 x 100 feet; six to eight bushels per acre on new ground without grass; for reseeding three to four bushels per acre. For Putting Greens we advise 100 lbs. of seed for greens 100 x 100 feet. For Fairways, 8 to 10 bushels per acre. For Pasture and Hay Fields, 4 to 5 bushels per acre, based on a 20-pound bushel.

Prices quoted on Mixed Grass Seeds are prepaid in quantities up to one peck to the first and second zones; please add 20c. per $\frac{1}{2}$ bu., 30c. per bu. for the above zones if wanted by parcel post; for other zones, see parcel post table second cover page.

MICHELL'S CHOICE RECLEANED SEED WHEAT

FORWARD (Beardless)

This variety has gained rapidly in popularity. It has wonderful stooling properties, a single grain having been known to produce as high as fourteen stalks. A heavy yielder, 55 bushels per acre having been recorded. A very hardy variety, straw very thick-walled, of good length and bears up its heavy load of grain well. This variety is well liked by millers, the grain being of a dark color and of hard texture; medium early in ripening. Sow $1\frac{1}{2}$ to 2 bushels per acre. 20c. per qt. (by parcel post 30c.); larger quantity, price upon application.

LEAP'S PROLIFIC (Beardless)

A most prolific variety indeed and may be relied upon to give big crops. It stools out strongly and roots deeply. The grain is large, dark red and of the best milling qualities. The heads are large, the chaff is beautiful white and is without beards. "Leap's Prolific" is one of the earliest to ripen and we recommend it as an all-around good variety. Sow $1\frac{1}{2}$ bushels per acre. 20c. per qt. (by parcel post, 30c.); larger quantity, price upon application.

"MIRACLE" (Bearded)

This variety produces a magnificent heavy growth of straw which is very stiff and erect. The head is bearded and contains well-shaped red grains of a semi-hard nature of excellent milling qualities. **It is a tremendous stooler, one grain producing as many as 25 stalks with often 45 grains to the head or stalk.** Often yields from 40 to 45 bushels per acre under average conditions. We recommend sowing one bushel per acre. It is early to mature and produces straw often 5 feet high. 20c. per qt. (by parcel post, 30c.); larger quantity, price upon application.

PENNSYLVANIA 44 (Bearded)

A variety originating at the Pennsylvania Agricultural Experiment Station and developed from the Fulcaster. Grains red, purple straw, white chaff. It is a few inches taller than Fulcaster, and with stiffer straw. This variety has yielded an average of 35 bushels per acre. Sow $1\frac{1}{2}$ to 2 bushels per acre. 20c. per qt. (by parcel post, 30c.); larger quantity, price upon application.

RED WAVE (Beardless)

A very popular variety, succeeding in all kinds of soil, and has been especially successful in lands not too rich in lime. Upon sandy, gravelly soil Red Wave is especially suited. This variety is a heavy producer; heads are extremely long, with grains closely set; on good rich soil this variety has yielded 40 to 45 bushels per acre. It takes a little longer for this variety to mature than the earliest varieties. The straw is long and withstands storms remarkably well. Grains large and dark red and produces flour of good quality. This is truly a worthy variety, the result of a cross of Red Clawson and an unnamed cross-breed of Russian parentage. 20c. per qt. (by parcel post, 30c.); larger quantity, price upon application.

Prices of Seed Wheat fluctuate constantly and will be quoted upon application.
